Do You Know of a Better Investment?

If you were entirely satisfied that a certain high grade security would substantially increase in value during the next sixty days-would you purchase it?

Yes?

Well, then, why not consider the Paige Fairfield "Six-46" in precisely the same light?

It is only a matter of weeks now before the price of this famous model will be increased.

Do you know of any better way to invest \$1375 with absolute certainty of profits in money and personal satisfaction?

As you know, the costs of material and labor have jumped skyward during the past year. To meet this condition, we must charge more for our product—because we positively refuse to sacrifice quality no matter what the commodity prices may be.

So, as a clean-cut business proposition, can you afford to overlook such a rare opportunity?

Remember, the Paige Company challenges any manufacturer in the industry to produce a carwithin three hundred dollars of the Paige price—which offers as much luxury, comfort and all around dependability as the Fairfield "Six-46". This challenge stands uncontested.

BEST TIME TO CUT SUDAN HAY GRASS

Sudan grass yields the best hay when cut just after full bloom. There are times when it is advisable to cut the hay before it has reached full the hay before it has reached full bloom, on account of removing the first cutting, so as to get a more abundant second crop. If the season is short it may be impossible to get two full crops, and in this case it would be better to cut the first one prematurely. Sudan grass will probably stand longer without deteriorating in its hay producing qualities than any other of the forage crops.—J. F. Nicholson, Agronomist, Experiment Station, University of Arizona.
